

APPLICATIONS

CHIME ON MOTION

A PHH02 Indoor Remote Chime can be set to one of the "+" switches causing a gentle "ding-dong" audible alert when someone has come near the house.

It is not necessary to use a separate Unit Code for every Module, you may place as many Light, Appliance or other X10 Receiver Modules around the residence as you desire. Simply set to a single Code that the PHS01 transmits to. This however, does not allow individual operation from any Controller during non-motion triggered events.
