

APPLICATIONS

CONTACT CLOSURE ON MOTION

Another device commonly used is the PUM01 Universal Module.

When Motion trips the PHS01 and the Codes are sent to turn ON the PUM01, the contact closure that is output from the PUM01 can be used to connect to a video recorder system trigger causing a scene to be recorded for a predetermined length of time.

The PUM01 can respond with a latch or a momentary contact relay that can be used for a variety of functions.
