

# APPLICATIONS

## SPRINKLER DETERRENT TO ANIMALS

Another creative application of the PUM01 is to close the contact on a sprinkler valve actuator causing a single zone of your irrigation system to open.

Setting the timer on the PHS01 to 0.1 (actually 6 seconds) would allow the sprinkler zone to open and close just long enough to ward off any unwanted animals from destroying your yard or garden. Setting the light-dark adjustment would allow day and night deterrence or just night.
